

Nose wax

STEP 1. Put wax into the paper cup

Amount: 5 grams (approximately 100 beads or enough to cover the bottom of the cup).

STEP 2. Melt the wax

Method 1: Using the microwave

Add 20 ml of water to the measuring cup, place the paper cup on top, and microwave for 60–90 seconds until the wax is fully melted.

(500W: 90–110 seconds; 600W: 60–90 seconds)

Note: There is a risk of burning your skin, so be careful not to overheat it.

Method 2: Using boiling water

Add 80 ml of hot water to the measuring cup, place the paper cup on top, and let the wax melt completely. *(This usually takes 2–3 minutes.)*

Method 3: Using a wok

Add 80 ml of water to the measuring cup, place the paper cup on top, and heat in a wok until the wax beads are fully melted.

STEP 3. Cover your mustache

You can place the mustache protector over your mustache if desired.

STEP 4. Dip into the melted wax

Twist the tip of the applicator into the wax to get the right amount. The entire tip of the applicator should be evenly coated with a layer of wax.

STEP 5. Insert the applicator into the nostril

While inserting the applicator into the nostril, twist it slightly and press on the side of the nose to improve grip.

Wait for 1–2 minutes.

(Do not twist or move the applicator once it's in place.)

STEP 6. Pull out nose hair

Firmly hold your nose with one hand and pull the applicator downward with the other hand in one quick motion—as fast as possible.

(Do not do it slowly, as that will pull on the hair painfully.)

HBKS Nosywax user instructions

- Only use the wax after you have fully understood the instructions in this manual.
- If you have allergies or skin conditions, please consult your doctor before use.
- Keep out of reach of children and do not use on children.
- Only use the specially provided nose wax.
- Do not overheat the wax; overheating in the microwave can be dangerous.
- If the wax gets into your eyes or mouth, rinse thoroughly with water and seek medical help as soon as possible.
- During the production process, the wax may vary in shape. This is not a quality issue and does not affect its use.
- As this product may damage skin and mucous membranes, avoid using it repeatedly within a 2-week period.
